

- i. Mean
- ii. Median
- iii. Mode
- Mean Of grouped frequency distribution can be calculated by the following methods.

(i) **Direct Method**

$$\text{Mean} = \bar{X} = \frac{\sum_{i=1}^n f_i x_i}{\sum_{i=1}^n f_i}$$

Where X_i is the class mark of the i^{th} class interval and f_i frequency of that class

(ii) **Assumed Mean method or Shortcut method**

$$\text{Mean} = \bar{X} = a + \frac{\sum_{i=1}^n f_i d_i}{\sum_{i=1}^n f_i}$$

Where a = assumed mean

And $d_i = X_i - a$

(iii) **Step deviation method.**

$$\text{Mean} = \bar{X} = a + \frac{\sum_{i=1}^n f_i u_i}{\sum_{i=1}^n f_i} \times h$$

Where a = assumed mean

h = class size

And $u_i = (X_i - a)/h$

- Median of a grouped frequency distribution can be calculated by

$$\text{Median} = l + \left(\frac{\frac{n}{2} - cf}{f} \right) \times h$$

Where

l = lower limit of median class

n = number of observations

cf = cumulative frequency of class preceding the median class

f = frequency of median class

h = class size of the median class.

- Mode of grouped data can be calculated by the following formula.

$$\text{Mode} = l + \left(\frac{f_1 - f_0}{2f_1 - f_0 - f_2} \right) \times h$$

Where

l = lower limit of modal class

h = size of class interval

f_1 = Frequency of the modal class

f_0 = frequency of class preceding the modal class

f_2 = frequency of class succeeding the modal class

- Empirical relationship between the three measures of central tendency.

$$3 \text{ Median} = \text{Mode} + 2 \text{ Mean}$$

$$\text{Or, Mode} = 3 \text{ Median} - 2 \text{ Mean}$$

- Ogive

Ogive is the graphical representation of the cumulative frequency distribution. It is of two types:

(i) Less than type ogive.

(ii) More than type ogive

- Median by graphical method

The x-coordinated of the point of intersection of 'less than ogive' and 'more than ogive' gives the median.

LEVEL – 1

S/no	Question	Ans
1	What is the mean of 1 st ten prime numbers ?	12.9

2	What measure of central tendency is represented by the abscissa of the point where less than ogive and more than ogive intersect?							Median	
3	If the mode of a data is 45 and mean is 27, then median is _____.							33	
4	Find the mode of the following							Mode =40	
	X _i	35	38	40	42	44			
	f _i	5	9	10	7	2			
5	Write the median class of the following distribution.							30-40	
	Class	0-10	10-20	20-30	30-40	40-50	50-60		60-70
	Frequency	4	4	8	10	12	8		4

LEVEL – 2

SELF – EVALUATION

1. What is the value of the median of the data using the graph in figure of less than ogive and more than ogive?

2. If mean = 60 and median = 50, then find mode using empirical relationship.
 3. Find the value of p , if the mean of the following distribution is 18.

Variate (x_i)	13	15	17	19	$20+p$	23
Frequency (f_i)	8	2	3	4	$5p$	6

4. Find the mean, mode and median for the following data.

Classes	0-10	10-20	20-30	30-40	40-50	50-60	60-70
frequency	5	8	15	20	14	8	5

5. The median of the following data is 52.5. find the value of x and y , if the total frequency is 100.

Class Interval	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80	80-90	90-100
frequency	2	5	x	12	17	20	y	9	7	4

6. Draw 'less than ogive' and 'more than ogive' for the following distribution and hence find its median.

Classes	20-30	30-40	40-50	50-60	60-70	70-80	80-90
frequency	10	8	12	24	6	25	15

7. Find the mean marks for the following data.

Marks	Below 10	Below 20	Below 30	Below 40	Below 50	Below 60	Below 70	Below 80	Below 90	Below 100
No. of students	5	9	17	29	45	60	70	78	83	85

8. The following table shows age distribution of persons in a particular region. Calculate the median age.

Age in years	Below 10	Below 20	Below 30	Below 40	Below 50	Below 60	Below 70	Below 80
No. of persons	200	500	900	1200	1400	1500	1550	1560

9. If the median of the following data is 32.5. Find the value of x and y .

Class Interval	0-10	10-20	20-30	30-40	40-50	50-60	60-70	Total
frequency	x	5	9	12	y	3	2	40

SECTION – A (F A1)**MCQ(CARRING, 1 MARKS EACH)**

- Q1. Euclid's division lemma states that for any two positive integer 'a' and 'b' there exists unique integer q and r such that $a=bq+r$ where r must satisfy.
- $1 < r < b$
 - $0 < r \leq b$
 - $0 \leq r < b$
 - $0 < r < b$
- Q2. If α, β are the zeroes of the polynomial $2y^2 + 7y + 5$ then the value of $\alpha + \beta + \alpha\beta$ is .
- 1
 - 2
 - 1
 - 2
- Q3. The value of c for which the pair of equations $cx - y = 2$ and $6x - 2y = 3$ will have infinitely many solution is
- 3
 - 3
 - 12
 - No value
- Q4. If in the two triangles ABC and PQR, $\frac{AB}{QR} = \frac{BC}{PR} = \frac{CA}{PQ}$ then
- $\triangle PQR \sim \triangle CAB$
 - $\triangle PQR \sim \triangle ABC$
 - $\triangle CBA \sim \triangle PQR$
 - $\triangle BCA \sim \triangle PQR$
- Q5. In fig.1 $\angle BAC = 90^\circ$ and $AD \perp BC$ then,
- $BD \cdot CD = BC^2$
 - $AB \cdot AC = BC^2$
 - $BD \cdot CD = AD^2$
 - $AB \cdot AC = AD^2$

**SECTION B****(EACH QUESTION CARRY 2 MARKS)**

- Q6. Use Euclid's Division Algorithm to find the HCF of 135 and 225.
- Q7. Write a quadratic polynomial the sum and product of whose zeroes are 3, -2.
- Q8. Find the number of solution of the following pair of linear equations:

$$x + 2y - 8 = 0$$

$$2x + 4y = 16$$

- Q9. In fig:2, $BC \parallel DE$. Find EC

- Q10. In adjoining fig: A, B and C are points on OP, OQ and OR respectively such that $AB \parallel PQ$ and $AC \parallel PR$ show that $BC \parallel QR$

- Q11. Solve that equation by substitution method
 $8x+5y=9$
 $3x+2y=4$

SECTION C
(EACH QUESTION CARRIES 3 MARKS)

- Q12. Find all the zeroes of the polynomial $3x^4+6x^2-2x^2-10x-5$, if two of its zeroes are $\sqrt{\frac{5}{3}}$ and $-\sqrt{\frac{5}{3}}$
- Q13. Prove that $\sqrt{5}$ is irrational.
- Q14. Solve the following pair of equations by reducing them to a pair of linear equation:

$$\frac{1}{3x+y} + \frac{1}{3x-y} = \frac{3}{4} \text{ and } \frac{1}{2(3x+y)} - \frac{1}{2(3x-y)} = \frac{1}{8}$$

- Q15. In an equilateral triangle prove that three times the square of one side is equal to four times the square of one of its altitudes i.e $4AD^2=3AB^2=3BC^2=3CA^2$.
- Q16. ABC is an isosceles triangle right angled at C. Prove that $AB^2=2AC^2$.

SECTION D

(EACH QUESTION CARRIES 4 MARKS)

Q17. State 'Basic Proportionality theorem' or 'Thales Theorem' and prove it.

OR

Area of two similar triangles are in ratio of the squares of the corresponding sides.

Q18. Five years ago Nuri was thrice as old as Sonu. Ten years later Nuri will be twice as old as Sonu. How old are Nuri and Sonu?

ANSWERS

1. (a)
2. (a)
3. (d)
4. (a)
5. (c)
6. 45
7. X^2-3x-2
8. Infinitely many solutions
9. 2 cm
- 10.
11. $X = -2$, $Y = 5$
12. -1,-1
- 13.
14. $X = 1$ and $Y = 1$
18. Nuri's present age= 50 years, Sonu=20 years
